General Description

With human-machine interfacing requiring ever higher functionality and intuitiveness, touch panel type interfaces are rapidly becoming the norm for the new millennium.

TC332 is a 2 channel capacitive sensing device. The device can operate as a controller for 2 keys.

Features

☐ The device controls 2 completely independent touch sensing keys
☐ Autocal for life - no adjustments required
☐ System cost reduction
☐ Reliability through reducing system complexity
☐ Embedded noise immunity circuit
☐ RoHS compliant SO-8 package

Applications

☐ Media Players
☐ Consumer Electronics
☐ Home appliances
☐ Keypads
☐ Mechanical switch replacement
☐ Sealed control panels, keypads

Pin Diagram

VSS	1	8	VCC
VREG	2	7	O0
SEN	3	6	O1
CX0	4	5	CX1
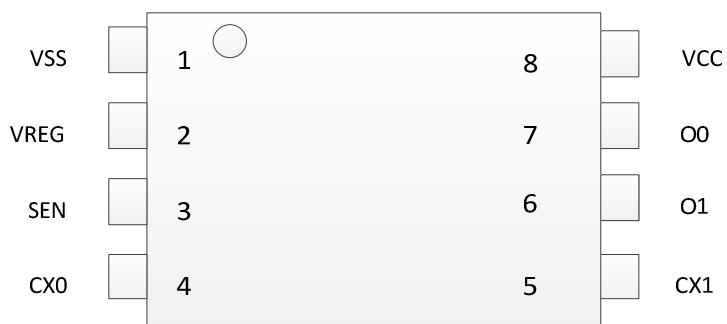

Pin Description

Pin	Name	I/O	Description
1	VSS	Ground	Supply Ground
2	VREG	Analog Output	Reference output
3	SEN	Analog I/O	Sensitivity Set
4	CX0	Analog I/O	Sensor pad for chanel0
5	CX1	Analog I/O	Sensor pad for chanel1
6	O1	Digital Output	Output for CX1(open-drain)
7	O0	Digital Output	Output for CX0(open-drain)
8	VCC	Pwr	Power in
Pin	Name	I/O	Description

SEN

Sensitivity set pin, the capacitance range is 15pf ~100pf.   The smaller the value the higher the sensitivity

**VREG**

Reference voltage output, connected to 4.7nf capacitance.

CX0，CX1

Capacitive sense pins connected to electrodes. Series resistance is 3KΩ.
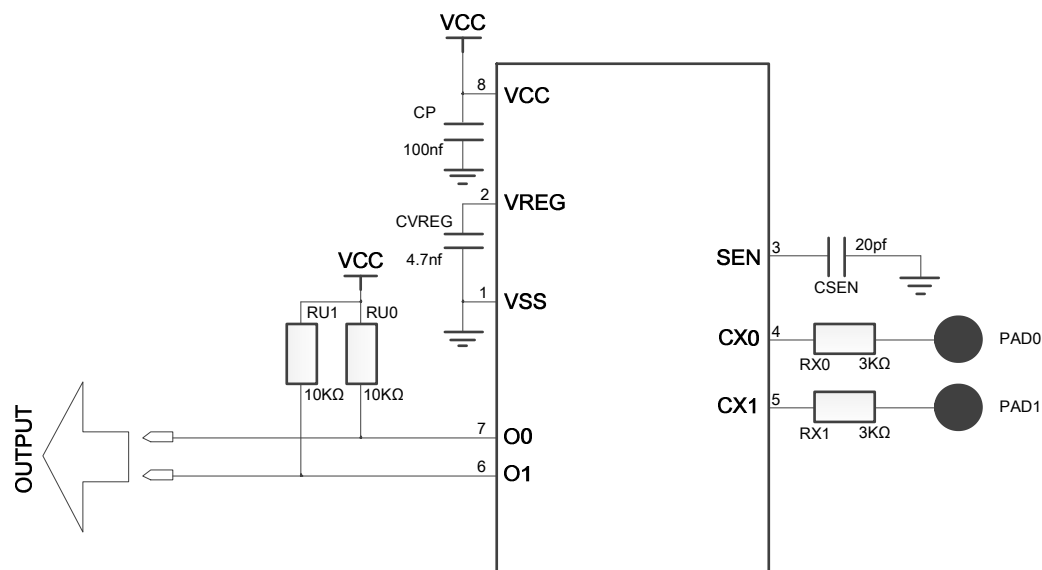

O0，O1

Parallel output ports of CX0~CX1 respectively. The structure of these parallel output ports is open drain NMOS for active low output level operation.
Application Circuit

Analog Voltage Output

KEY	O0	O1	Voltage of AO
KEY0(CX0) Pushed	LOW	High-z	0v
KEY1(CX1) Pushed	High-z	LOW	0.5*VCC
NO KEY	High-z	High-z	VCC

PCB Layout Notice

1． VCC and VSS power line should be drawn alone, and can not share power line with other chips(micro-controller and LCD driver,etc.). So as to prevent the chip from being affected by noise signal going throng the power line.

2． CP，CVREG，CSEN these three capacitances should be placed as close as possible to the chip. And the series resistors on wire of sense pad should also be placed as close as possible to the chip.

3. The larger area of grounded copper, the more immunity to noise Interference.

4. The sense traces and pad should be paid more attention to. The chip should be placed as close as possible to sense pad. The sense traces should be drawn to sense pad directly. The length of the different sense traces is not necessarily equal. The width of sense traces should be as small as possible. There should not be other power line and signal traces around the sense trace. If it can not be avoided, the other traces should cross the sense trace vertically. The distance between sense pads should be greater than 5mm. The distance between sense pad and grounded copper should be greater than 1.5mm.

Absolute Maximum Rating *

Operating temperature	-40 ~ +85ºC
Storage temp	-50 ~ +150ºC
VCC	-0.3 ~ +6.5V
Max continuous pin current, any control or drive pin	±10mA
Voltage forced onto any pin	-0.3V ~ (Vcc+ 0.3) Volts

* NOTICE: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.

Electrical Characteristics

TA = 25℃

Characteristics	Symbo	Condition	Min	Typ	Max	Units
Operating voltage	Vcc		2.5		6.5	V
Current consumption	Idd	VCC=5.0V		1.0		mA
		VCC=3.0V		550		uA
Self calibration time after chip reset	Tini			120		ms
Range of capacitance on Pad	CX				2.5*CSEN	
Output impedance (open drain)	Zo	Low voltage		50		Ohm
		Hi-z		100M		
Output sink current	Isk	VCC=5V			10.0	mA
Minimum detective capacitance difference	delta_CX	CSEN=15pf		0.2		pF
Sample cycle	Tsi	Normal working state		4.5		ms

ESD Characteristics

Mode	Polarity	Max	Reference
H.B.M	POS/NEG	8000V	VDD
		8000V	VSS
		8000V	P to P
M.M	POS/NEG	500V	VDD
		500V	VSS
		500V	P to P
